Sender

Sender is a simple program for sending email white custom smtp server in C#.

Sender use your information to logging to your account and sending **Same** email For some person.

Sender is Free and Open to use For Everyone and not should to use my name on your app.

Sender is not secure for long time use And important Data and information.

If you want you can edit code to use file in your email with making one Attachment object and Add this to your email like this :

```
Attachment file = new Attachment("yourfilepathe");
```

and next use this :

```
mail.Attachments.Add(file);
```

!Tips :

if you want use google smtp server you should go to setting and Enable **IMAP**

your server **must** use SSL protocol or edit code
